

AWS/Azure DevOps Engineer

Overview

Croptimistic Technology (SWAT Maps) builds leading-edge technology for Precision Agriculture.

We are looking for a motivated DevOps Engineer to help us move our services to the AWS cloud and set up CI/CD the right way.

Candidates should understand how to configure AWS with Terraform and other build tools. Our systems have high performance requirements for databases/AI so you will need to be capable of analyzing and optimizing cloud systems and servers.

A lot of our existing infrastructure will be changed. You will have input into the tech stacks going forward.

Job Responsibilities

- Architect and configure AWS server and cloud resources for test and production systems
- Create CI/CD processes for deployment of applications

Qualifications

- 2+ years experience in a DevOps role
- Must be an exceptional team member and communicator
- Experience building and maintaining CI/CD pipelines
- Strong understanding of AWS (IAM, EC2, SQS, Route53, Terraform, S3, Lambda)
- Experience managing RDBMS (ie Postgres)
- Docker + Kubernetes, or equivalent
- Linux and scripting
- Networking, VPN, Firewalls
- Focus on cyber security and best practices
- Degree in software development, or similar training

Location

- Kelowna, BC (Temporarily Remote) preferred
- Fully remote will be considered within Canada

Compensation/Benefits

- Medical/Dental plan
- RRSP Matching

- For the right candidate fit, we are willing to compensate at or above market, negotiable.

How to Apply

Send us your resume at careers@swatmaps.com

Our developers would love to have a chat with you and convince you to join our team.
